

Gulfkriget - erfarenheter strukturerade efter:

- historisk översikt geografiskt område
- risker för civilbefolkningen, scudmissiler, kemiska och biologiska vapen,
- skydd för befolkningen i Irak, Israel och Saudiarabien.

Examines, analyzes and evaluates documents and materials related to the civilian protection and rescue services in the war-affected countries. It reviews background of the assignment, identifies the geographical areas, objectives, data collection and sources, and constraints which confronted the implementation of this assignment.

It examines types of risks and hazards threatened the war-affected countries. It reviews the vulnerability and resilience of the civilian population in Iraq, Israel and Kingdom of Saudi Arabia. The physical protection, warning systems, information networks, evacuation plans, rescue services, fire fighting and relief operations for the above mentioned countries have also been examined. In addition, it scrutinizes urban development planning and its impact on the protection of civilians with reference to Riyadh. Lessons learned and experiences gained from the Gulf War for the civilian protection and rescue services have also been presented.

It addresses itself to all technical and professional staff on various levels within the afore-mentioned departments and organizations. Issues addressed and examined in details in relation to their respective areas of specialty, should be observed and scrutinized. Lessons learned and experience gained from the three war affected countries, should inspire them in re-thinking of new directions, re-evaluating needs and priorities and proposing innovative measures for improvement of civilian protection and rescue services vis-a-vis high tech-weapons of modern warfare.
