Kortvarig brand på en kemikaliefabrik.

840305 MARS 1984_01

Etylenoxid som läckte ut vid en fläns antändes och orsakade en brand på fabriken. Branden fick näring från etylenoxid som fortsatte att läcka ut till dess att alla processer stoppats helt och lämpliga ventiler stängts. Branden släcktes inom kort.

Inblandade ämnen och mängder

etylenoxid 75-21-8 **Mängd** okänt

Skador:

Människor: Inga. Materiella: Inga.

Miljö/ekologi: Inga effelkter rapporterade.

Infrastruktur: Inga.

Erfarenheter redovisade (Ja/Nej): Ja

Kortfattat redovisas förebyggande åtgärder.

Report Profile

description of suspected causes

Immediate Effects:

material loss: Yes

human deaths: No

human injuries: No community disruption: No

other: No

ecological harm: No

national heritage loss: No

description:

MATERIAL LOSS:

The explosion caused large damages to the plant and the nearby buildings but no data are available about the

cost of the material losses.

Emergency Measures taken:

on-site systems: Yes decontamination: No

external services: No restoration: No

sheltering: No other: No

evacuation: Yes

description:

INTERNAL TO THE ESTABLISHMENT:

An internal alarm was given: the gas inlet to the heating room was shut-down and the cable shaft was sealed.

The plant was evacuated.

Immediate Lessons Learned:

prevention: Yes other: No

mitigation: No

description:

immediate lessons learned

A Occurrence Full Report

country: FA **ident key:** 1984_001_01

1 Type of Accident

remarks: A leakage of butane (rupture of a membrane of a pressure regulator) occurred

in the heating room of the plant (code 1101). Through the cable shaft, the

explosive butane cloud entered the transformer station and was ignited,

resulting in an ... see Appendix Full Report A / type of accident

2 Dangerous Substances

remarks: The total establishment and the potential directly involved inventories of

butane refer to the amount involved in the unconfined vapour gas explosion.

3 Source of Accident

illustration: - not applicable -

remarks: The accident occurred in an inorganic chemical industry manufacturing lead

oxide used for surface coating and dyes (code 2001). The explosion occurred

in the transformer station (codes 3106 and 4008) but the butane's leakage

happened in the... see Appendix Full Report A / source of accident - remarks

Appendices for the FA / 1984 001 01 report

Appendix Short Report / description of accident types:

ACCIDENT CASE HISTORY DESCRIPTION:

A leakage of butane (rupture of a membrane of a pressure regulator) occurred in the heating room of the plant. Through the cable shaft, the explosive butane cloud entered the transformer station and was ignited, resulting in an unconfined gas cloud explosion. An internal alarm was given: the gas inlet to the heating room was shut-down and the cable shaft was sealed. The plant was evacuated.

Appendix Short Report / description of suspected causes:

INITIATING EVENT AND CONSEQUENCES:

Leakage of butane in the heating room of the plant and immission of the explosive gas cloud into the nearby transformer station through the cable shaft. The butane cloud was then ignited resulting in an unconfined gas cloud explosion.

CAUSES:

The leakage of butane was caused by the rupture of a pressure regulator membrane.

Appendix Short Report / description of immediate lessons learned:

MEASURES TO PREVENT ANY RECURRENCE OF SIMILAR ACCIDENTS:

After the accident, the following measures were established:

- 1- substitution of the regulation unit;
- 2- installation of a gas alarm system with automatic plant shut-down when 25% of the lower explosion limit is reached;
- 3- annual inspection of the whole plant by external experts.

Appendix Full Report A / type of accident:

A leakage of butane (rupture of a membrane of a pressure regulator) occurred in the heating room of the plant (code 1101). Through the cable shaft, the explosive butane cloud entered the transformer station and was ignited, resulting in an unconfined gas cloud explosion (code 1307).

Appendix Full Report A / source of accident - remarks:

The accident occurred in an inorganic chemical industry manufacturing lead oxide used for surface coating and dyes (code 2001). The explosion occurred in the transformer station (codes 3106 and 4008) but the butane's leakage happened in the heating room of the plant. The leakage of butane occurred due to the rupture of a

pressure regulator membrane (code 4010).

Appendix Full Report B / area concerned - remarks:

In the Original Report there is no evidence of significant effetcs outside the establishment.

Appendix Full Report B / ecological harm:

In the Original Report there is no evidence of significant ecological harms.

Appendix Full Report B / material loss:

The explosion caused large damages to the plant and the nearby buildings but no data are available about the cost of the material losses.

Appendix Full Report B / disruption of community life:

In the Original Report there is no evidence of significant effetcs outside the establishment.

Appendix Full Report C / lesson learned - prevent:

After the accident, the following measures were established:

- 1- substitution of the regulation unit;
- 2- installation of a gas alarm system with automatic plant shut-down when 25% of the lower explosion limit is reached;
- 3- annual inspection of the whole plant by external experts.
